FUNDUSZ SPOŁECZNY

WHO WE ARE?

We are a group of automotive service technician students.

Why do we study in a Technical College?

- ✓ *Our school in Koszalin has a fine and well-established tradition of vocational teaching.*
- ✓ *It is a typical technical school with many vocational profiles.*
- ✓ *Still it is commonly known as a school of cars “samochodówka”.*

There are also a few girls in our school.

Stoisko koszalińskiego Zespołu Szkół nr 10, popularnej „samochodówki” cieszyło się wczoraj sporym zainteresowaniem zwiedzających.

AN AUTOMOTIVE SERVICE TECHNICIAN – a profile description.

- *The study as an automotive service technician lasts four years.*
- *During this period the following subjects are delivered: the basis of mechanical design and construction of machines, mechanical technology, laboratory of electrotechnology and automobile electronics, design and construction of automobiles, car-driving lessons, practical classes and specialization.*

- *Apart from the vocational subjects, the program includes foreign language teaching and traffic and safety rules.*
- *Every week we have our practical workshops during which we put the theory into practice.*

At our school we use new diagnostic equipment such as:

- ▣ *Bosch KTS 650, Carman Scan, Automedics, Mega Macs 55 Gutmann and D-Jetronic system.*
- ▣ *While working on these machines, we learn how to check and service the various models of cars.*

- *We are working with lathes, drills CMMs, grinders, honing machines and other equipment.*
- *It is obligatory for each student to pass workshops in order to revise the material, when new information is obtained.*

- ▣ *In the end of the course, in order to receive the diploma of an automotive vehicles technician it is necessary to pass the final exam.*

What can we do , once we finish the school?

- *As a graduate trainee of a Technical College, we are prepared to diagnose the technical condition of vehicles, maintain, repair, organize and supervise the automotive vehicle services.*
- *We are also able to control the technical condition of the units and automotive systems and check the overall vehicle operation by means of special diagnostic equipment and other installation tools.*

- *In Poland, car mechanics are usually employed in specialized auto service garages, in diagnostic and auto repair centers and service and repair stations. Some of them are able to set up their private, automobile workshops.*

➤ *So as a graduate trainee, we have the opportunity to be employed in one of the following sectors:*

-car sales and purchase showrooms;

-automobile repair shops;

-vehicle diagnostic stations;

- companies selling automotive parts and supplies

-automotive manufacturing plants.

**LET US NOW
INTRODUCE
OURSELVES**

I'm Marcin. I'm doing my work placement in a local car workshop. During my practice in Seville I am learning auto diagnosis of different car branches. Apart from this, I am practicing key coding and servicing and repairing of vehicle defects. I am very happy about this possibility of doing a work placement in Spain.

- ▣ *My name is **Kamil**. During my work placement in Spain I work in a car service where I learn how to repair cars and thus I can improve my professional skills. Since I am still in the middle of my vocational training, at work I perform basic, simple tasks on my own and more difficult ones with the help of my boss. I am very happy about his opportunity, because I can finally put all the theory into practice and work on my skills.*

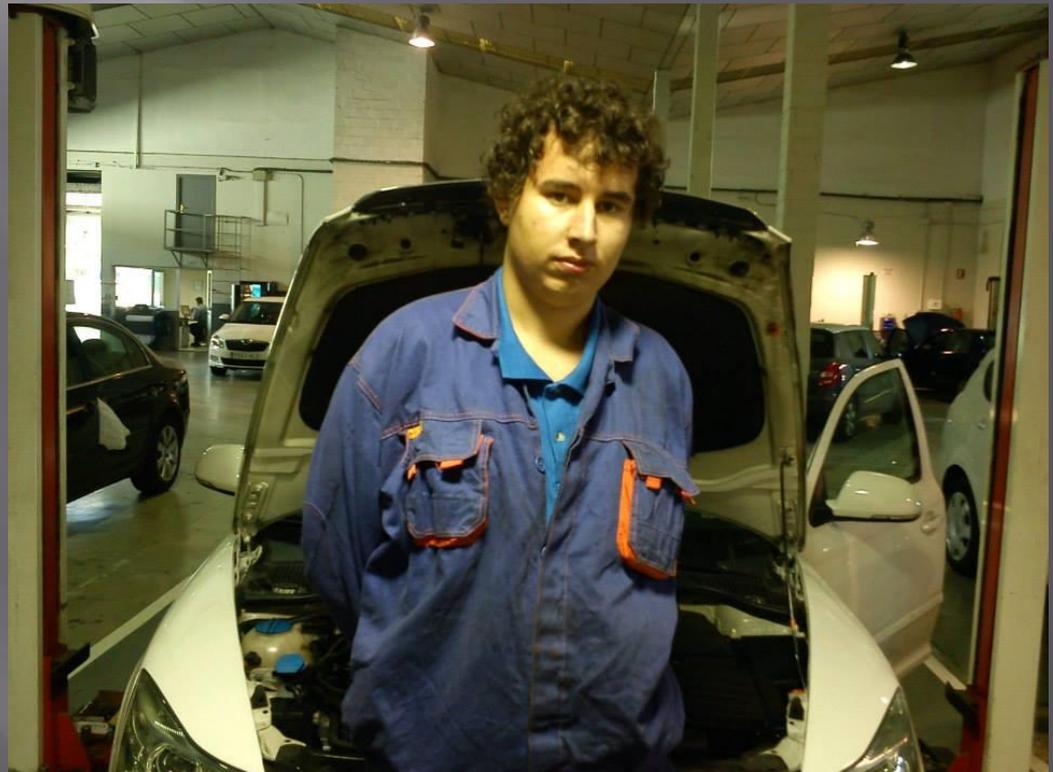

- *My name is Adrian. In Seville I am doing my training in the local workshop. There I have the chance to gain some practical skills and develop my interest in car servicing. My colleagues are two Spanish car mechanics who show me how to become a master of auto repair. I am happy about this practice because I can gain more knowledge of a car's inner workings.*

- ▣ *I'm Alek. In Spain I'm doing my work placement in Skoda Service where I'm servicing and repairing cars and preparing new ones for sale. In Poland I have got already familiar with the automobile repairing procedures in the workshops I used to work in, however here I can get even more practical knowledge. I really enjoy looking after beautiful and fast vehicles.*

- ▣ I'm **Piotrek**. In Spain, I'm doing my work placement in a workshop where I service and repair passenger cars, mainly Škoda. What I like the most about this practice is the fact that I can basically work with brand-new cars. Although most of my tasks I have already practiced in Poland, I am very satisfied with my current training.

- ▣ *My name is **Ola**. I am doing my work placement in a local car service, which mainly deals with service and repair of motor vehicles. Here I acquire a lot of professional knowledge mainly by working with automotive technicians. For most of the time, I am observing their work and then try to follow the instructions while performing maintenance and repair services. My main goal here is to acquire practical skills, gain work experience as a mechanic and get to know some Spanish and local culture. I am also having a great time here while working with my colleagues. My work placement is the best and the people working there are my second family!*

▣ *Hi, my name is **Marcin**. In Seville I am doing my work placement. In my workshop I am assigned a lot of different tasks, so that I can gain new skills and professional experience. For most of the time, I work there on my own, performing the highest quality maintenance and repair services such as changing different car components. I have to admit that I am very happy with the practice in Spain.*

▣ *My name is Jakub. I have my work placement in a local workshop. Since we have a lot of work, every day is quite busy and I can learn a lot about car servicing while using the latest techniques. At work I can observe my colleagues and assist them in car checks. I am very happy to have this chance of practicing my skills in here and my experience in Spain so far has been very positive.*

**THANK YOU FOR YOUR
ATTENTION**

GRACIAS ! 😊
